Professional summary

IT professional with hands-on experience in endpoint deployment and management, Active Directory, network infrastructure, and engineering test-lab instrument support for a manufacturer with two sites, 200+ endpoints, and 100+ users. Strong PowerShell automation background spanning remoting tools, PDQ Deploy packages, and scheduled-task installers with verification. Known for driving issues to root cause through event logs, minidumps, and driver-level analysis, then building durable tools and documentation. Hands-on with hardware replacement on Windows machines, printers and Zebra label printers, barcode scanners, digital signage, and client-side networking (DHCP, DNS, static IP). CompTIA A+ certified; Network+ and CCNA in progress.

Professional experience

Help Desk Technician (Full-time)

June 2025 — Present

WCMagnetics | Stockton, CA

- Troubleshoot and replace failed hardware on Windows desktops, laptops, and lab PCs (RAM, SSDs, peripherals, docks), then reimage or restore them and return them to service.
- Support printers and Zebra label printers (stuck queues, drivers, TCP/IP ports and print-server queues), USB and handheld barcode scanners (detection, cables and cradles, reprogramming with configuration barcodes), and production-floor digital signage (shift dashboards and status boards on TVs and tablets).
- Resolve client-side network issues: DHCP lease failures, DNS resolution, IP conflicts, and static-IP assignments for printers and equipment, tracing faults from the PC through the cable and wall jack to the switch.
- Upgraded 100+ computers from Windows 10 to Windows 11; rolled out Windows 11 25H2 fleet-wide through PDQ Deploy using offline ISO media.
- Packaged and deployed software silently with PDQ Deploy, including SOLIDWORKS 2026 SP1.1 with admin-image fixes, an uninstall workflow, a PowerShell install wrapper, and registry-based verification; also deployed shared printers to lab fleets.
- Built the WCM Toolbox, a PowerShell 7 web UI that puts the team's daily remote-support scripts (remoting, WinRM, autologon, profile removal, hardware health, cleanup, scheduled-task installers) one click away, and the WCM IP Scanner, a subnet sweep that keeps a MAC/hostname inventory of every device on the network.
- Upgraded the UPS WorldShip workgroup (admin workstation plus five remote shipping stations) from 2024 to 2026 after hours with no shipping downtime.
- Supported engineering test-lab instruments from Keysight, Rigol, and Voltech over GPIB, USB, and LAN, including Excel VBA measurement templates and vendor escalations.
- Diagnosed hard faults: BSODs traced to failing RAM with WinDbg and MemTest86; a USB driver broken by a Windows update code-integrity policy; a recurring graphics driver rollback; and application freezes caused by folder redirection over unstable Wi-Fi.
- Resolved Sage 100 2024 connection and PDF-printing failures, migrated ODBC-driven reporting spreadsheets to a new Sage server, and fixed Outlook, Foxit, and Quest Desktop Authority issues.

- Imaged and configured desktops, laptops, and Intel NUC lab machines; created and managed Active Directory accounts; and produced an employee onboarding document suite on company letterhead.
- Terminated Ethernet cabling, replaced wall jacks, and ran acceptance testing on a 56-port jack installation with a contractor punch list; and resolved DNS/domain-controller connectivity failures.
- Provided remote support to the Mexico manufacturing plant, including PowerShell-remoting printer cloning and Spanish-language Windows builds; performed routine patching through Splashtop RMM.

General Merchandise Expert (Part-time)

November 2019 – Present

Target

- Manage general merchandise operations, including inventory, stocking, and sales-floor presentation.
- Built strong communication, organization, and customer service skills across 6+ years in a fast-paced retail environment.

Education

Associate's Degree, Computer Science

Completed 2024

Modesto Junior College

Certifications

CompTIA A+ Core 1 & Core 2, V15 — Earned 2026

CompTIA Network+ N10-009 — In progress – target: Q2 2027

Cisco CCNA 200-301 v1.1 — In progress – target: Q4 2027

Selected projects

- **Task App** — Self-hosted task tracker with a PowerShell HTTP backend and JSON persistence; Kanban, list, and calendar views; Pomodoro and recurring tasks; runs as a Chrome progressive web app.
- **MyNotes** — OneNote-style Markdown notes synced across devices: Node/Express and Postgres on Render, offline cache in IndexedDB, page history, paragraph tags, and PowerShell syntax highlighting.
- **Pocket** — Phone-first money tracker on Firebase (Firestore, Hosting, Google sign-in) with safe-to-spend forecasting, a daily-balance calendar, and GitHub Actions deploys.
- **Lab Instrument Automation** — Excel VBA templates that drive Keysight LCR meters over LAN, USB, and GPIB, scaled from one meter to a three-meter cascade.

Technical skills

- **Systems & endpoint administration:** Windows 10/11 administration and imaging, Active Directory, Microsoft 365, Debian, Intel NUC, Raspberry Pi, Ventoy, Splashtop RMM, Quest Desktop Authority, ProTight (ProSuite).
- **Automation & development:** PowerShell 5.1 and 7, Invoke-Command/WinRM remoting, WPF, scheduled tasks, PDQ Deploy, Python, HTML/CSS/JavaScript, Node.js/Express, PostgreSQL, Firebase, GitHub Actions, Git/GitHub, Excel/VBA.
- **Hardware & peripherals:** Windows desktop/laptop hardware diagnosis and replacement, Zebra label printers, network printers and print servers, USB/handheld barcode scanners, digital signage displays.
- **Networking & diagnostics:** TCP/IP, DHCP, DNS, static IPs, IP conflicts, print servers, cable termination and jack testing, WinDbg, MemTest86, ODBC.

Languages

English: Native. **Spanish:** Professional working proficiency, including support for users at the Mexico plant.
